# Office Action Summary

Application No.

10/057,631

Applicant(s)

BURCH ET AL.

Examiner

Bennett Celsa

Art Unit

1639

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 37-43 and 45 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 37-43 and 45 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 12/2/02; 1/25/02.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_.

## **DETAILED ACTION**

### ***Status of the Claims***

Claims 37-43 and 45 are currently pending and under consideration..

### ***Election/Restriction***

1. Applicant's election without traverse of Group II (claims 37-43 and 45; use in methods of oxycodone and SC-58215) in the correspondence dated 6/14/04 is acknowledged. It is noted that the chemical formula in the claims corresponds to SC-58125 (See attached printout of Registry Number 162054-19-5).

2. Applicant's response (dated 7/28/04) to the non-compliant letter is acknowledged.

### ***Priority***

Applicant should update the cross-reference to parent application which has subsequently issued as a patent.

### ***Specification***

3. The disclosure (e.g. specification, abstract and title) is objected to because of the following informalities: the disclosure incorrectly recites "SC-58215" and not SC-58125 which corresponds to 5-(4-fluorophenyl)-1-[4-methylsulfonyl]phenyl]-3-trifluoromethyl 1H-pyrazole as presently claimed.

Appropriate correction is required.

Art Unit: 1639

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103<sup>®</sup> and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 37-40, 42-43 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baker et al. US Pat. No. 4,569,937 (2/86), Penning et al. J. Med. Chem. Vol. 40 (April 1997) pages 1347-1365 and/or Siebert et al. PNAS USA Vol. 91 (Dec. 1994) pages 12013-12-17.

Baker et al. teach pharmaceutical compositions for relieving pain in humans or mammals (e.g. mice, rats etc.) comprising a combination of :

a. a narcotic analgesic (preferably oxycodone: see formulations col. 4-8; mice data in col. 8-10; patent claims), or a pharmaceutically acceptable salt thereof; and

Art Unit: 1639

b. a non-steroidal anti-inflammatory drug or NSAID (preferably ibuprofen: see col. 1-2), or a pharmaceutically acceptable suitable salt thereof,

in a weight ratio of about 1:800 (e.g. .001:1) to 1:1 (compare to present claim 47: See col. 2)

with oxycodone amounts of about 5 mgs-600mgs (compare to present claim 46).

The Baker reference teaches oral administration (e.g. see present claim 39), which can be coadministered in a "single dosage form" (e.g. see col. 3-8: and present claim 40) or sequentially administered (e.g. as in present claim 42; see i.e. col. 8-9 ; "... mice are dosed sequentially..."). The Baker et al. reference teach that dose ratios can be adjusted and that the analgesic activity of the combined oxycodone and ibuprofen activity is "unexpectedly enhanced" or synergistic "i.e. the resulting activity is greater than the activity expected from the sum of the activities of the individual components", thereby permitting "reduced dosages of narcotic analgesics" (e.g. oxycodone) AND which diminishes adverse side effects (e.g. addiction) and toxicity which would result from the otherwise required amounts of the individual drug components" resulting from high dosages of oxycodone or NSAID's such as ibuprofen. See e.g. col. 1-2; col. 3, lines 19-32 (e.g. compare to present 43 and 44 "reduced" active ingredients).

Accordingly, Baker would teach the use of therapeutic and subtherapeutic amounts of oxycodone and/or ibuprofen in view of the synergistic nature of the combinations and the desire to reduce the toxicity and/or side-effects of both agents; and as required by the doctor for his/her particular patient., including dosage optimization e.g. dosage

Art Unit: 1639

overlapping of active ingredients. See e.g. col. 3 where dosage is modified to suit the particular patient.

The Baker analgesic composition differs from that presently claimed in that it fails to teach the substitution of meloxicam for ibuprofen, or alternatively, the further incorporation of (e.g. encompassed by "consisting essentially of") SC-58125 into the Baker compositions.

Penning et al. teach a series of sulfonamide-containing 1,5-diarylpyrazole derivatives which are selective COX2 inhibiting compounds based on SC-58125 (e.g. see compound 39 on page 1348) including SC-58635 (celecoxib) which are anti-inflammatory and analgesic without the principle gastrointestinal irritation side effects of the more common NSAID's (e.g. see abstract; page 1347). Accordingly, Penning et al. demonstrated for several SC-58125 derivative compounds, particularly celecoxib, both *in vitro* and *in vivo* (up to phase 2 clinical trials) that the selective COX2 inhibitors (e.g. celecoxib (SC-58635) ):

- a. had potent anti-inflammatory activity equivalent to NSAID's without the gastric toxicity side-effect of the NSAID's (e.g. celecoxib had no acute GI toxicity in rats at doses of up to 200 mg/kg and no chronic GI toxicity at doses up to 600 mg/kg);
- b. has good bioavailability, is well distributed, and has an excellent safety profile;
- c. is at least as potent against pain as aspirin in a phase 1 human clinical dental pain study.

See Penning abstract; page 1347; pages 1352-1354; Tables 1-10.

Art Unit: 1639

Similarly, Siebert et al. teach that SC-58125 is a “preferred” NSAID/selective COX-2 inhibitor (as compared to other NSAID’s) which in animal models (e.g. of acute inflammation; i.e. injection of carragenan into the footpad) is anti-inflammatory and efficacious in the treatment of pain (e.g. analgesic) with “substantial safety advantages over existing NSAIDS” e.g. “without causing gastric mucosal damage”. E.g. See Abstract; page 12013, right and left column; and “Results and Discussion” section.

Accordingly, one of ordinary skill in the art would have been motivated to substitute SC-58125 (a NSAID) for ibuprofen (a different NSAID) in the Baker reference compositions in light of the Penning and/or Siebert reference teachings that SC-58125 is at least equally efficacious, but is safer with less side effects (e.g. as compared to other non-selective COX-2 inhibitor NSAID’s i.e. ibuprofen).

Alternatively, one of ordinary skill in the art would have been motivated to incorporate SC-58125, with its potent analgesia and reduced side-effect, into the Baker ibuprofen/oxycodone compositions in order to reduce the amounts (e.g. therapeutic/subtherapeutic) of ibuprofen/oxycodone in order to avoid the side effects (e.g addiction) or toxicity resulting from ibuprofen/oxycodone.

Additionally, it is noted that the instant situation is amenable to the type of analysis set forth in *In re Kerkhoven*, 205 USPQ 1069 (CCPA 1980) wherein the court held that it is *prima facie* obvious to combine two (or more) compositions each of which is taught by the prior art to be useful for the same purpose

Thus, it would have been *prima facie* obvious to one of ordinary skill in the art at the time of applicant’s invention to modify the Baker reference analgesic composition by

Art Unit: 1639

substituting the NSAID SC-58125 (for the NSAID ibuprofen) or supplement Baker's composition with SC-58125 in light of the benefits of SC-58125 (increased safety/decreased side effect as compared to ibuprofen) as taught by the Penning and/or Siebert references.

6. Claims 37-43 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Baker et al. '937, Penning and/or Siebert references applied to claims 37-40, 42-43 and 45 above, and further in view of Mayer et al. US Pat. No. 5834,479 (11/98).

The teaching of the Baker, Penning and Siebert references recited above is hereby incorporated by reference in its entirety.

To the extent that the Baker, Penning and/or Siebert references fail to teach the administration of the analgesia active agent (e.g. SC-58125) "before, ... with, or after" administration of the oxycodone" (particularly before/after ) (e.g. see present claim 41) the Mayer et al. reference is cited.

The Mayer et al. reference teaches that analgesia effectiveness of an analgesia active agent (e.g. a NSAID, such as ibuprofen see i.e. table in col. 7) can be "significantly enhanced" by administering (e.g. oral administration) the active agent "prior to, with or following the administration of an analgesia enhancer" (e.g. a nontoxic NMDA receptor blocker and/or a nontoxic substance that blocks at least one major intracellular consequence of NMDA receptor activation) such as "dextromethorphan", which is the D-isomer of codeine . See e.g. col. 1; patent claims.

Accordingly, the Mayer et al. reference provides motivation to one of ordinary skill in the art to not only co- administer different analgesic agents to achieve enhanced

Art Unit: 1639

analgesia, but to also administer the NSAID prior or subsequent to the second analgesic agent i.e. an analgesia enhancer, which includes codeine or its derivatives (e.g. dextromethorphan, dextrophan, oxycodone etc.) .

Thus, it would have been prima facie obvious to one of ordinary skill in the art at the time of applicant's invention to modify the combined Baker, Penning and/or Siebert reference teachings by administering one of the analgesic active agents (e.g. SC-58125) "before, ... with, or after" administration of the second analgesic agent (e.g. oxycodone) in order to obtain significantly enhanced analgesia.

### **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bennett Celsa whose telephone number is 571-272-0807. The examiner can normally be reached on 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Wang can be reached on 571-273-0811. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
